V2 - VORTEX 353

Two years ago, Vortex introduced a dynamic dart flight for the power plant hitters. Now Vortex would like to introduce the new Vortex 353.

The 353 is every bit as aerodynamic and rib strengthened as the original Vortex, only now it is available in the more compact format - the wing surface area is only 35.3 cm.

So, when you're looking for maximum flight, think straight. Think Vortex!
